PROFILE SUMMARY

Aspiring Cybersecurity Analyst with a strong foundation in network security, ethical hacking, and OS hardening. Proven track record in developing threat detection tools and automating incident response. Committed to securing enterprise systems through proactive monitoring and risk mitigation.

EDUCATION

Sri Shakthi Institute of Engineering and Technology - Coimbatore, Tamil Nadu

B.E. Computer Science Engineering (Cyber Security) | Sep 2023 - Sep 2027 | CGPA: 7.3/10

P.A.C.R Memorial Higher Secondary School - Rajapalayam, Tamil Nadu

HSC: 78.6% (June 2022 - Apr 2023) | SSLC: Pass (June 2020 - Apr 2021)

SKILLS

Programming Languages: C, Python, JavaScript, SQL, Java

Databases: MySQL, MongoDB, JSON Evidence Stores

CyberSecurity: Networking, Ethical Hacking, Linux, Incident Response, MITRE ATT&CK, OS Hardening

Tools & Tech: GitHub, Git, Sysmon, ELK Stack, Wireshark, PyWin32, Tkinter, Flask, React, Docker

PROJECTS

1. Unified Blue Team Threat Detection and Alert System - (Python, Flask, Sysmon, ELK Stack)

- Built a real-time security monitoring system using Python, Flask, Sysmon, and ELK Stack.
- Detected brute-force attacks, malware activity, unauthorized USB access, and network scans.
- Automated incident response actions such as blocking IP addresses and terminating suspicious processes.
- Integrated MITRE ATT&CK mapping, risk scoring, and automated alert generation.

2. USB Forensics and Monitoring Toolkit - (Python, PyWin32, Tkinter GUI)

- Developed a Python-based USB forensics toolkit to monitor USB plug/unplug events.
- Implemented real-time USB detection using PyWin32 and logged events in secure JSON evidence files.
- Designed a Tkinter GUI dashboard to display USB logs, identifying unauthorized usage and data theft.

3. Automated Resume Analyzer in AI - (Python, NLP, Flask)

- Built a Flask web app that analyzes resumes and provides structured feedback using NLP.
- Supported PDF/DOCX parsing, skill extraction, and scoring against job descriptions.
